

Versionado de Software Git Branches

Tecnología de la Información en las Organizaciones

2022

Agenda

- ▶ Qué es una rama?
- ▶ Para qué utilizar ramas?
- ▶ Operaciones
 - ▶ Listar ramas
 - ▶ Crear rama
 - ▶ Fusionar ramas
 - ▶ Resolución de conflictos
 - ▶ Borrar ramas
- ▶ Ejemplo práctico
- ▶ Herramienta gráfica

Head

- Es el commit donde nos encontramos actualmente

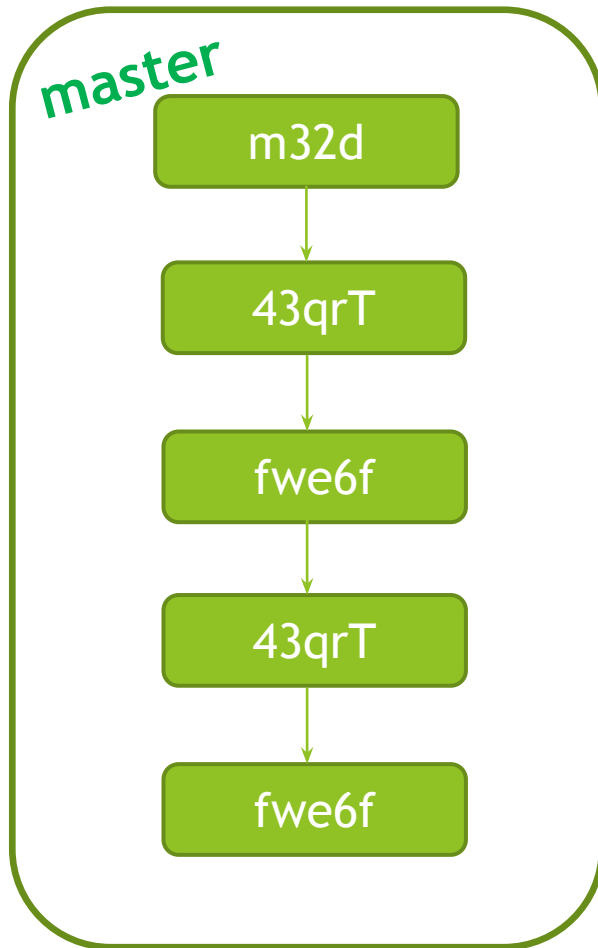

Qué es una rama?

master

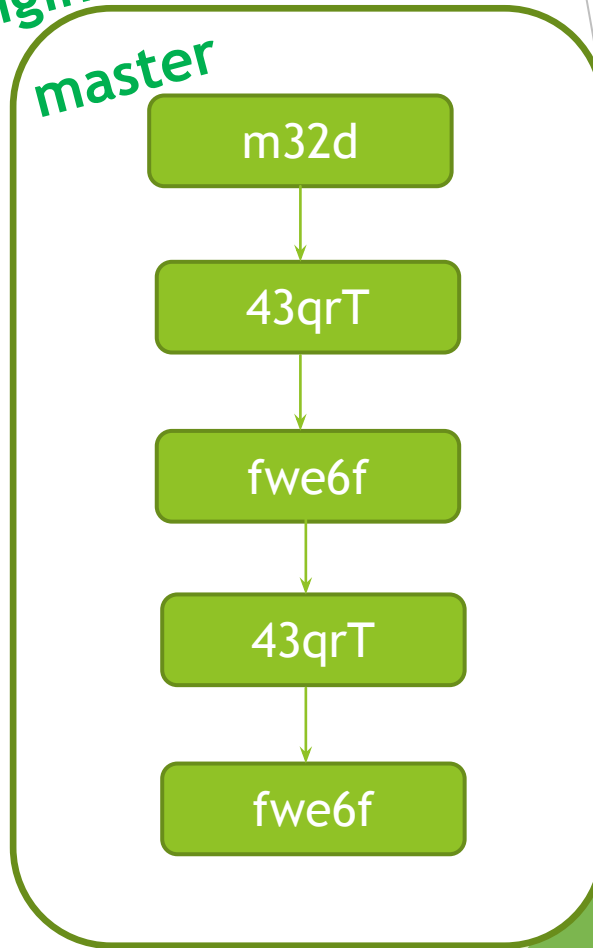

- ▶ Es una línea de tiempo en nuestro proyecto
- ▶ Se compone de una secuencia de commits
- ▶ Se utilizan para desarrollar nueva funcionalidad, corregir errores, realizar pruebas, etc.

Local

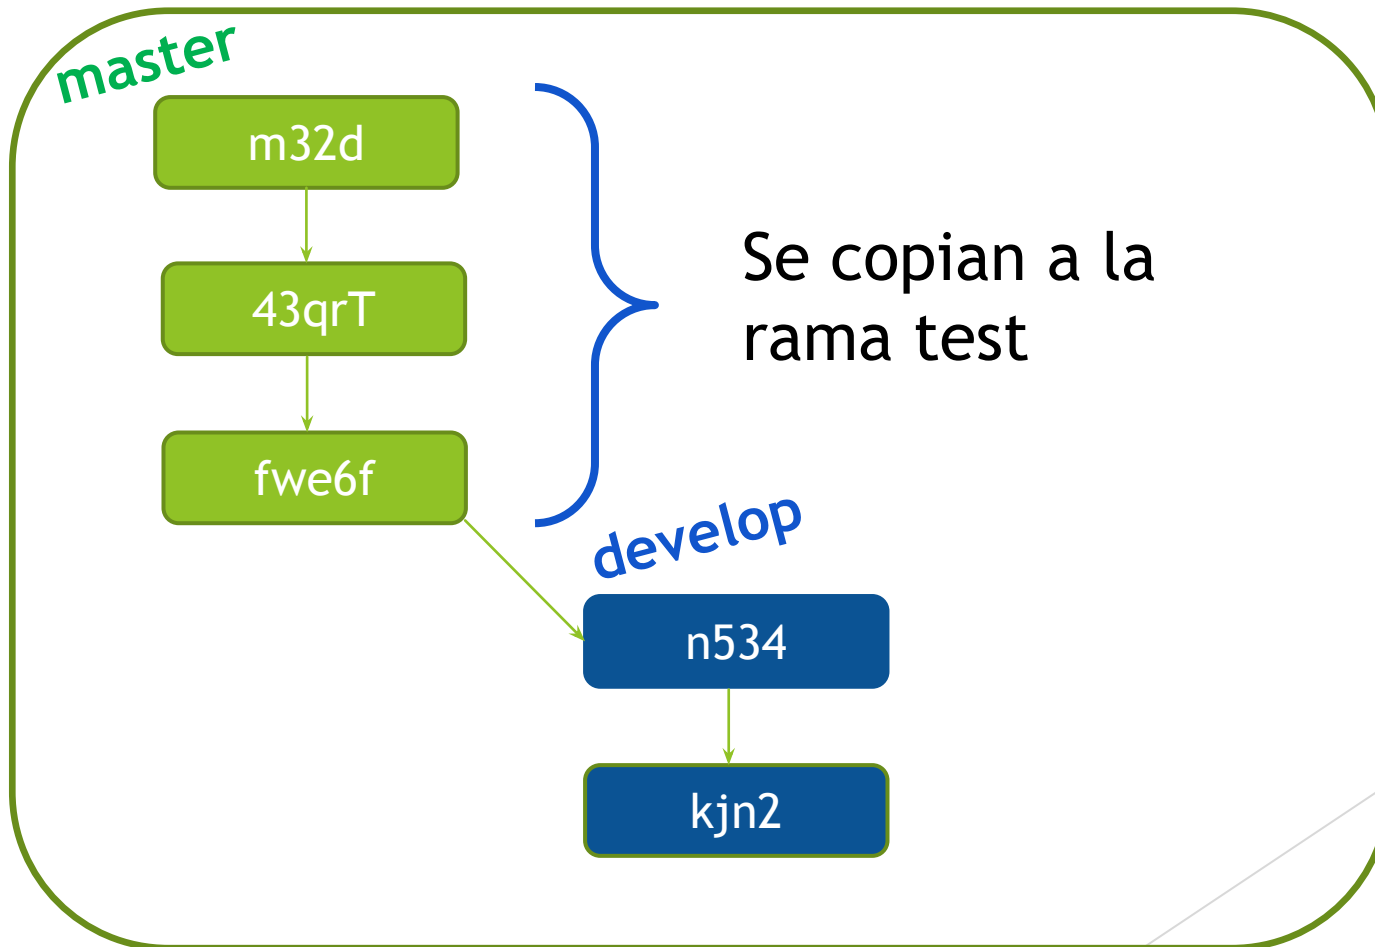

Remoto (github)

origin

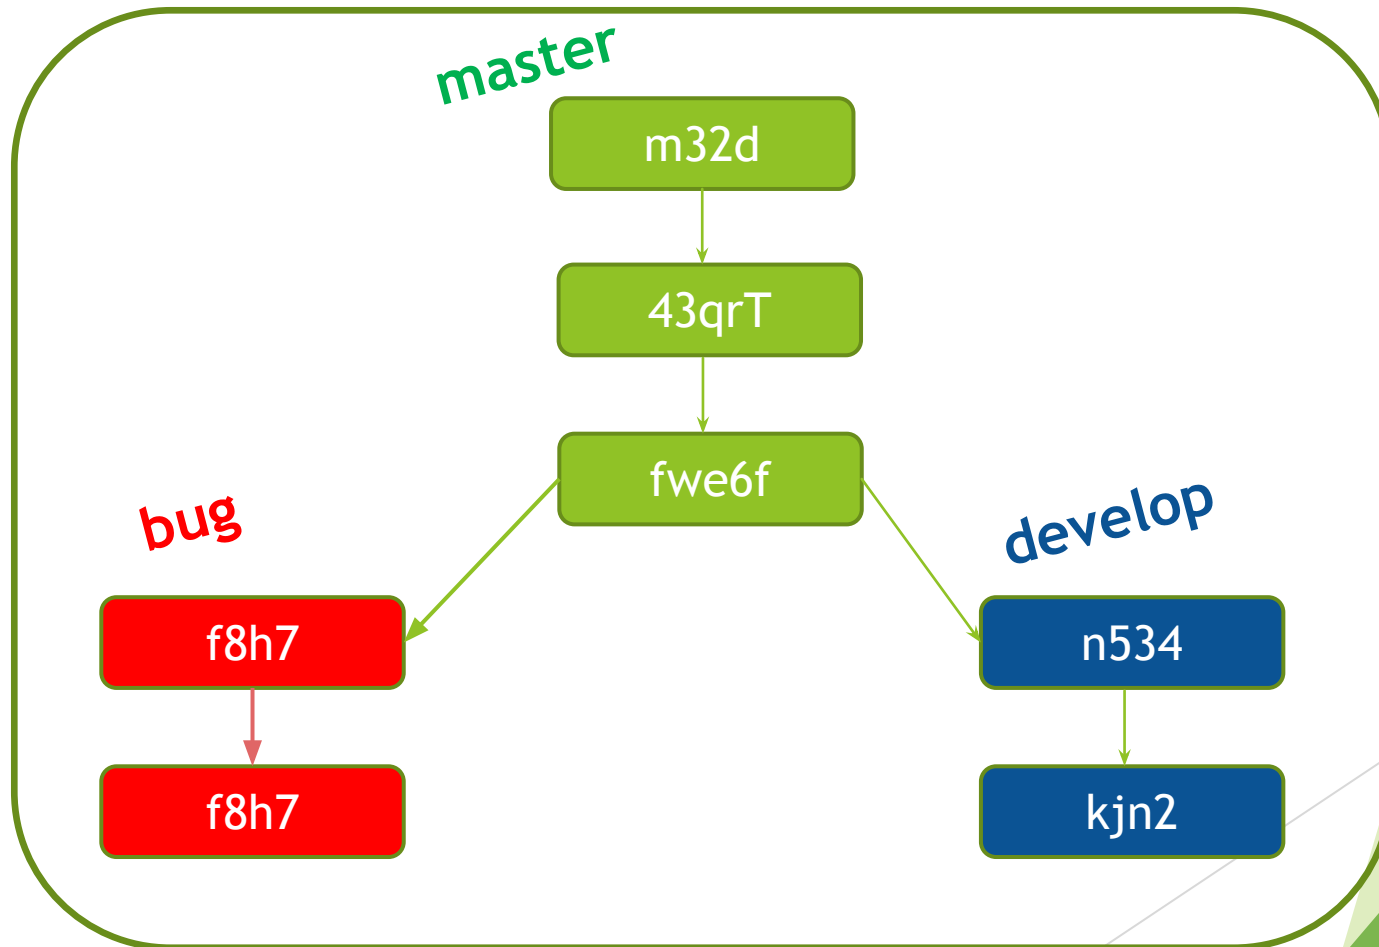

Git permite múltiples ramas

Local

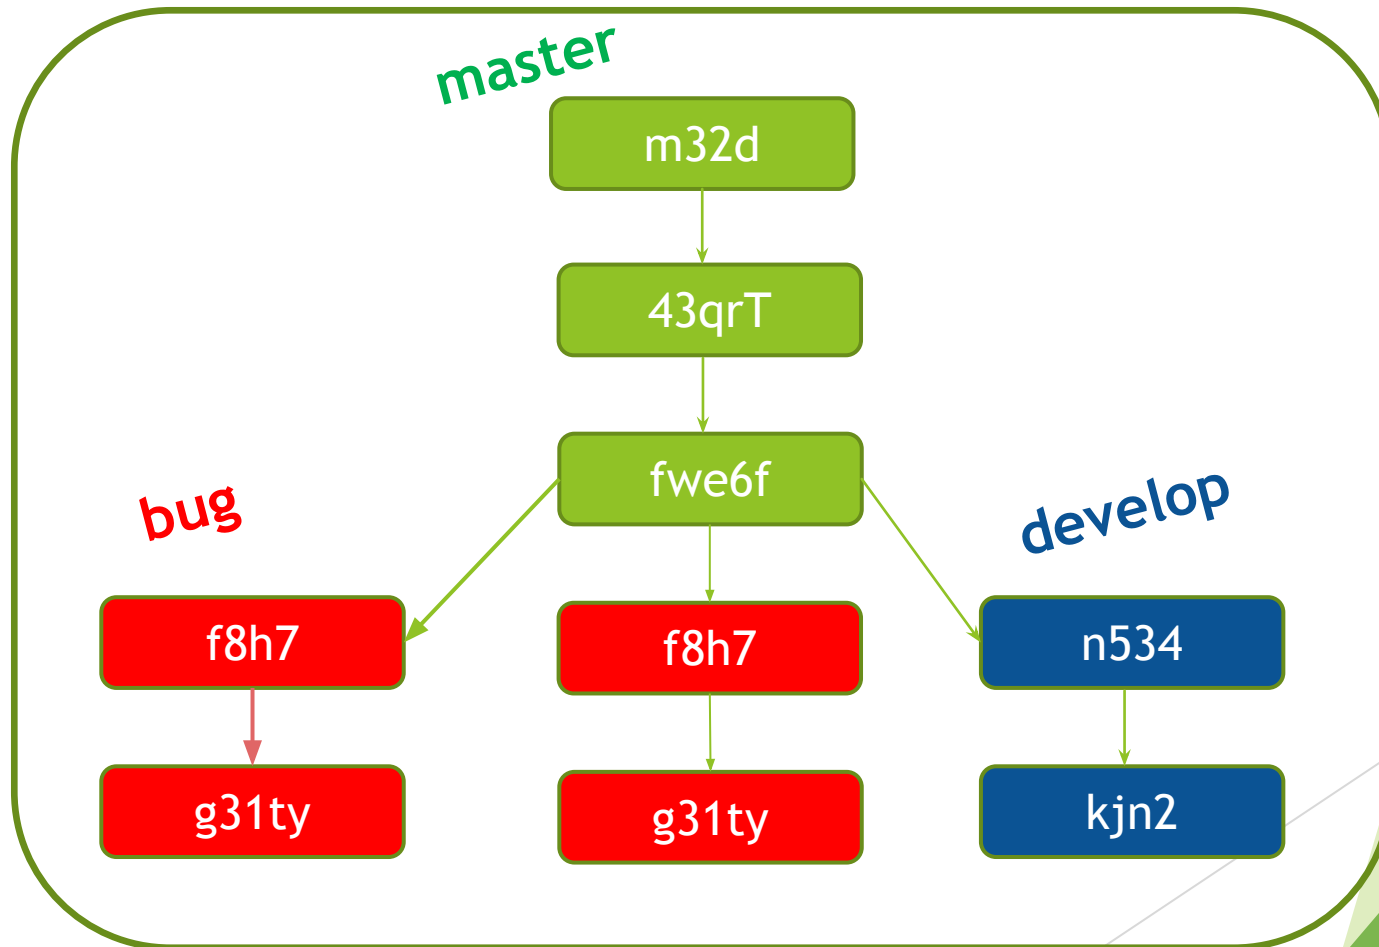

Git permite múltiples ramas

Local

Git permite múltiples ramas

Local

Operaciones básicas

Listar las ramas locales

git branch

```
MINGW64:/c/Users/braia/Desktop/example-tio  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch  
develop  
* master  
test  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$
```

- El * indica la rama a la que apunta el HEAD

Crear rama local

git branch <NAME>

```
MINGW64:/c:/Users/braia/Desktop/example-tio  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch  
* master  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch develop  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch test  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch  
develop  
* master  
test
```

- Se crea la rama, pero no se cambia el HEAD

Cambiar de rama

git checkout <NAME>

```
MINGW64:/c/Users/braia/Desktop/example-tio  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch  
develop  
* master  
test  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git checkout develop  
Switched to branch 'develop'  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (develop)  
$ |
```

- Si utilizamos **git checkout -b <NAME>**, creamos la rama y nos situamos en ella

Eliminar rama

git branch -d <NAME>

```
MINGW64:/c/Users/braia/Desktop/example-tio  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch -d test  
Deleted branch test (was 0aedf2a).  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/example-tio (master)  
$ git branch  
develop  
* master
```

- ▶ La rama se puede borrar si todas sus confirmaciones han sido absorbidas
- ▶ Para forzar el borrado de una rama debemos utilizar el parámetro **-D**

Ejemplo práctico

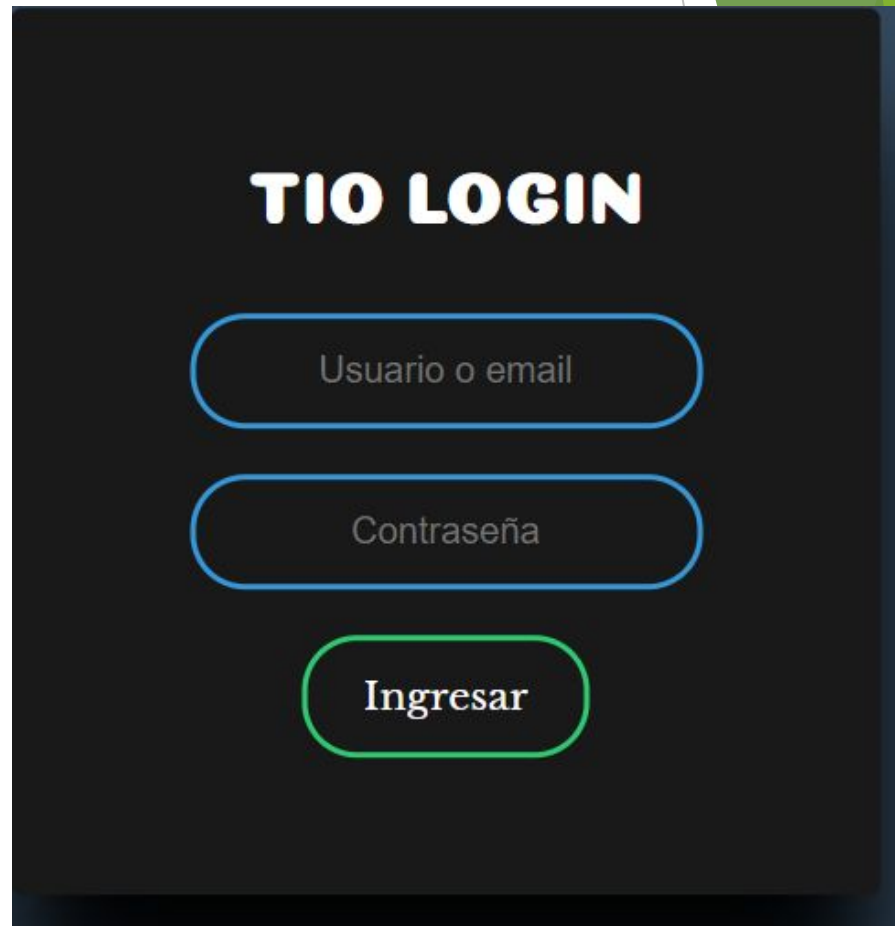

Pantalla de login

<https://github.com/brvarona/tio-login>

Pantalla de login

Actividades

- Realizar cambios de color en el título y el background
- Cambiar texto botón a mayúsculas

The image shows a dark-themed login interface. At the top, the text 'TIO LOGIN' is displayed in a bold, white, sans-serif font. Below the title, there are two input fields with rounded corners and a thin blue border. The first field contains the placeholder text 'Usuario o email' in a light gray font. The second field contains the placeholder text 'Contraseña' in a light gray font. Below these fields is a button with rounded corners and a thin green border, containing the text 'Ingresar' in a white, sans-serif font. The entire interface is set against a dark background with a subtle gradient.

Realizamos cambios en rama “estilos”

```
MINGW64:/c/Users/braia/Desktop/tio-login  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master)  
$ git checkout -b estilos  
Switched to a new branch 'estilos'  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (estilos)  
$ git status  
On branch estilos  
Changes not staged for commit:  
  (use "git add <file>..." to update what will be committed)  
  (use "git checkout -- <file>..." to discard changes in working directory)  
  
        modified:   login.css  
  
no changes added to commit (use "git add" and/or "git commit -a")  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (estilos)  
$ git add .  
  
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (estilos)  
$ git commit -m "cambios de color en titulo y background"  
[estilos 5fe3a03] cambios de color en titulo y background  
1 file changed, 2 insertions(+), 2 deletions(-)
```

TIO LOGIN

- ▶ Si cambiamos a la rama master con el comando `git checkout`
 - ▶ ¿Qué sucede?
 - ▶ `git log` ¿Qué dice?

En la rama master...

```
MINGW64:/c/Users/braia/Desktop/tio-login
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master)
$ git log
commit d2dee867768ab172fdadd06e7dc222864b072b9a (HEAD -> master, origin/master,
origin/HEAD)
Author: Braian Varona <brvarona@gmail.com>
Date: Sun Sep 6 19:04:13 2020 -0300

Fusionar dos ramas

```
git merge <NAME>
```

master

¡El merge se realiza sobre la rama activa!

> git merge estilos

Fast-Forward

- ▶ La fusión se realiza de manera automática
- ▶ No hay conflictos entre una rama y otra
- ▶ Git puede “unir” todo el contenido sin problemas

 MINGW64:/c/Users/braia/Desktop/tio-login

```
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (estilos)
$ git checkout master
Switched to branch 'master'
Your branch is up to date with 'origin/master'.

braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master)
$ git merge estilos
Updating d2dee86..9908fb1
Fast-forward
 login.css | 4 ++--
 login.html | 2 +-
 2 files changed, 3 insertions(+), 3 deletions(-)
```

Ramas divergentes

Manual merge

- El programador es quien debe resolver el conflicto

```
braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master)
$ git commit -m "cambio de color en título"
[master e4332bf] cambio de color en título
1 file changed, 1 insertion(+), 1 deletion(-)

braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master)
$ git merge estilos
Auto-merging login.css
CONFLICT (content): Merge conflict in login.css
Automatic merge failed; fix conflicts and then commit the result.

braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master|MERGING)
$
```

```
.container h1{
Accept Current Change | Accept Incoming Change | Accept Both Changes | Compare Changes
<<<<<< HEAD (Current Change)
  color: red;
=====
  color: yellow;
>>>>>> estilos (Incoming Change)
  font-weight: 500;
}
```

Confirmación del merge

- Para salir del estado “merging” es necesario resolver el conflicto, agregar los archivos a la staging area y luego realizar la confirmación.

```
Unmerged paths:
  (use "git add <file>..." to mark resolution)

    both modified:   login.css

braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master|MERGING)
$ git add .

braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master|MERGING)
$ git commit -m "fix merge conflicto"
[master 37e7f0d] fix merge conflicto

braia@DESKTOP-LP0G5F5 MINGW64 ~/Desktop/tio-login (master)
```

Ramas remotas

- ▶ `git push -u <remote> <remote_branch>`
- ▶ `git push -u <remote>`
`<local_branch>:<remote_branch>`

 * [new branch] estilos -> estilos
Branch 'estilos' set up to track remote branch 'estilos' from 'origin'.
```

- 
- ▶ ¿Por qué hacer *branches* del proyecto?
 - ▶ Para desarrollar software en paralelo e independiente entre los programadores
 - ▶ Para no afectar al código principal
 - ▶ Para disminuir errores

Git Extensions es una interfaz
gráfica para Git

<https://gitextensions.github.io/>

Git Extensions es una interfaz gráfica para Git

The screenshot displays the Git Extensions application window. The title bar reads "C:\temp\Development\ - Git Extensions". The menu bar includes File, Git, Commands, Remotes, Submodules, Plugins, Settings, and Help. The toolbar shows icons for refresh, file explorer, commit, and other Git operations. The main pane shows a list of commits with columns for Message, Author, and Author date. The commit "Merge remote branch 'MoOmEeN/master'" by Henk Westhuis is selected. The bottom pane shows the commit details for this merge, including the author's name and email, the date, the commit hash, and the file conflicts.

Message	Author	Author date
[qgpp/ContainedInRemote]Set CommitInfo's header to read only.	Grzegorz Pachocki	5 days ago
Show remote branches in "Contained in:" status line	Grzegorz Pachocki	5 days ago
[master][origin/HEAD][origin/master] Make sure users do not miss warnings -> now they blink for a few seconds!	Henk Westhuis	5 days ago
[qgpp/master]Use filesystemwatcher to determine if refresh is needed.	Henk Westhuis	5 days ago
Warning when in the middle of a merge conflict is now also shown after using context menu in revision grid.	Henk Westhuis	5 days ago
Merge remote branch 'MoOmEeN/master'	Henk Westhuis	5 days ago
Spelling fixes, make things static that can be, removed unused params and local vars, don't close when you c	Kevin Moore	6 days ago
improve and bugfix for branch filter	Radek Miazio	6 days ago
Refresh revisions after edit settings	Henk Westhuis	6 days ago
Added two virtual revision to revision graph for current working dir changes and commit index.	Henk Westhuis	6 days ago
Fixed characters '!', '!' and '-' in quick filter.	Henk Westhuis	6 days ago

► Resumen

- `git branch`: lista las ramas locales
- `git branch <rama>`: crea una nueva rama
- `git checkout <rama>`: cambia el puntero HEAD a <rama>
- `git branch -d <rama>`: borra la rama
- `git merge <rama>`: fusiona el contenido de <rama> en la rama en la que estamos parados
